Subject : Upcoming French EPR requirements – Professional packaging information request

Dear [Supplier's Name],

As part of new environmental regulations in France, a specific compliance scheme for professional packaging (B2B) will be implemented starting in early 2026, under the Extended Producer Responsibility (EPR) framework.

This regulation will apply to all companies placing packaged products on the French market for professional use. To anticipate these changes, we are currently identifying and listing all professional packaging associated with our products.

In this context, CITEO PRO, which is currently a candidate for official approval as an eco-organization, is already working with companies to help them prepare for compliance with the upcoming system.

To prepare our future declaration, we kindly ask for your support in providing key information about the packaging you supply to us, including:

- » Type of packaging (e.g. cardboard, plastic, wood, metal, etc.)
- » Function (primary, secondary, tertiary)
- » Material composition and weight
- » Associated product reference or name

Please find enclosed a **standardized form** to help collect this information easily. Your cooperation is essential to ensure compliance with future French requirements and to promote responsible packaging management throughout our supply chain. Please don't hesitate to contact us if you have any questions.

Thank you very much for your support and collaboration.
