

Everything **you need to know** about
**EXTENDED PRODUCER
RESPONSIBILITY FOR
PROFESSIONAL
PACKAGING**

Extended Producer Responsibility (EPR) for professional packaging is due to take effect in 2026.

DOES THIS AFFECT YOU?

PRODUCERS OF professional packaging

Do you produce, import or distribute packaged products or professional packaging?

Under the EPR scheme, you will assume responsibility for managing the end-of-life of your packaging (sorting, collection, processing). If you wish to share some of the burden, you can get support by joining an approved producer responsibility organisation!

Improving recycling

by enhancing the traceability of flows and focusing efforts on materials for which 2025 targets have not been met (plastics, aluminium, steel), so that we can all work collectively towards meeting targets for 2030.

Harnessing the power of reuse

by supporting existing solutions, encouraging innovation and improving monitoring of flows.

Professional packaging

WASTE HOLDERS

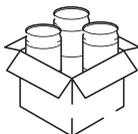

Do you manage the end-of-life of professional packaging by arranging for it to be recycled and/or reused?

You play an essential role: by optimising sorting processes and arrangements for collecting professional packaging, your input is central to ensuring the reuse and successful processing of packaging waste.

WHICH SPECIFIC PACKAGING TYPES does this concern?

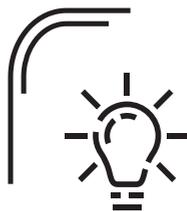

Sales packaging:
drums, containers, crates, jars, cardboard boxes, etc.

Multi-pack packaging:
crates, cardboard boxes, etc.

Transport packaging:
pallets, inserts, dividers, films, big bags, etc.

What is **EPR?**

The Extended Producer Responsibility (EPR) system is based on the 'polluter pays' principle, whereby companies responsible for placing packaging on the market are required to manage its end-of-life (sorting, collection, ironmental impact). They can delegate this task to an approved producer responsibility organisation in return for an eco-contribution.

We'll be working closely with you to **CO-DEVELOP THIS NEW SCHEME:**

1 Identifying and managing performance indicators

to help you steer your roadmap in the right direction.

2 Activating the 3R levers of reduction, reuse and recycling

and sharing them with a whole sector.

3 Promoting best practices

with innovative ects and by sharing effective methods.

4 Turning packaging into a resource

to limit its environmental impact.

Under the EPR system, companies will be required to join an approved producer responsibility organisation with effect from 2026.

We're here to support you.

CONTACT US!

CITEO PRO WILL SUPPORT YOU THROUGH THE IMPLEMENTATION PHASE OF THIS NEW EPR SCHEME.

Citeo Pro is the Citeo producer responsibility organisation for professional packaging. Approved for the food service packaging EPR scheme since 15 March 2024, Citeo Pro has also applied to be approved for the professional packaging EPR scheme.

Citeo Pro teams will work with you to ensure that guidelines for this new scheme are defined optimally and progressively, so that its roll-out occurs in the best possible conditions.

OUR ROLE

To help our clients with their eco-design and reuse projects as well as their compliance processes.

To support sorting at source, collection, reuse and recycling of professional packaging.

To speed up the development of professional packaging reuse.

To ensure the quality and effective traceability of collected and reused packaging.

To advise packaging waste holders on how to implement and improve best sorting practices.

To ensure compliance with regulatory requirements relating to the EPR scheme.
